# i'm francesco

---

nice to meet you,
: i am a developer passionate about free software, data visualisation and functional programming

my story
: i studied computer science thoroughly during my years of university. i worked as a developer on the whole stack and with different technologies and focuses. i covered different roles before freelancing, then roles became less and less adequate to describe my work. nowadays, besides the quality of software, i care about having a meaningful and personal communication with my team and the users

how i work
: i am a fan of simplicity and essentiality. i always try to clarify problems before, around and beyond the software i write. i also care a lot about having an open attitude, sharing and contributing to free software. i often relied on evolutionary prototyping as a methodology to bridge conflicting project goals while involving the users as early as possible in the development process

some dates

| | |
|---|---|
| freelancing | since 2015 |
| evolutionary prototyping, team coordination, emergency management, distributed systems, offline apps | |
| full stack, innovation developer at sourcefabric | 2014 |
| data vis and frontend developer at deltamethod | 2013 |
| backend developer at dada.net | 2011 — 2012 |
| master degree in computer engineering, at pisa university, 108/110 | 2006 — 2010 |
| networking & multimedia | |
| linux system administration course at ephestus, in catania | 2006 |
| bachelor degree in computer engineering, at pisa university, 110/110 | 2001 — 2005 |
| software engineering fundamentals | |
